Buildin Functions in Python

In [2]:
```
print("Welcome") #print function
```

```
Welcome
```

In [4]:
```
x = input("Enter your name") # input function
print(x)
```

```
Shraddha
```

In [6]:
```
print(x)
```

```
Shraddha
```

In [8]:
```
print(len(x)) # count length
```

```
8
```

In [10]:
```
a = 3.14 # type of variable
print(type(a))
```

```
<class 'float'>
```

In [12]:
```
print(int(a))
```

```
3
```

In [14]:
```
c = int(input("Enter a number")) #SUM
d = int(input("Enter a Number"))
print("Sum is:", c+d)
```

```
Sum is: 100
```

In [16]:
```
num = [60,5,8.9,27,789,68.9] #maximum value
print(max(num))
```

```
789
```

In [18]:
```
print(min(num)) #minimum value
```

```
5
```

In [20]:
```
for i in range(6):
    print(i)
```

```
0
1
2
3
4
5
```

In [22]:
```
print(sorted(num)) #arrange the data
```

```
[5, 8.9, 27, 60, 68.9, 789]
```

In [24]:
```
print(abs(-66)) #positive value
```

```
66
```

In [26]:
```
print(round(9.19)) #round number
```

```
9
```

In [28]:
```
num = [60,5,8.9,27,789,68.9] #combine two list elementwise
num1 = [4,'hii',3.14,66]
print(list(zip(num,num1)))
```

```
[(60, 4), (5, 'hii'), (8.9, 3.14), (27, 66)]
```

math module

In [36]:
```
import math as m
```

In [38]:
```
print(m.sqrt(49))
```

```
7.0
```

In [40]:
```
print(m.floor(7.89))
```

```
7
```

In [42]:
```
print(m.ceil(7.89))
```

```
8
```

In [46]:
```
print(m.pow(9,2))
```

```
81.0
```

In [48]:
```
print(m.factorial(5))
```

```
120
```

In [54]:
```
from math import sqrt, floor, ceil, pow
print(sqrt(49))
print(floor(6.66))
print(ceil(6.66))
print(pow(2,3))
```

```
7.0
6
7
8.0
```
